SMART CIRCULAR ECONOMY PLATFORM

RELOOP 360

Stakeholder Analysis and Database Design

Odoo implementation · Configuration only

Scope and constraints

Business scope

Returned electronics and equipment, surplus goods and near-expiry food. Recovery routes: repair, resale, donation, recycling, scrap or disposal.

Implementation constraint

Standard Odoo apps and configuration only. No custom development, no Odoo Studio. Gaps are documented as limitations or future enhancements.

Process: Receive → Inspect → Decide → Recover

1 Receive

Intake from suppliers, stock-in with lots or serials.

2 Inspect

Condition checks with recorded results.

3 Decide

Route chosen: repair, resale, donation, recycling or scrap.

4 Recover

Route executed with traceable stock and financial records.

Stakeholder register: 12 groups

Supply and partners

Suppliers and retailers
Resale customers
Donation organizations
Recycling partners

Operations

Sourcing team
Warehouse operator
Quality inspector
Repair technician or partner

Control and delivery

Accounting and finance
Management and project owner
Odoo administrator
Food-safety and compliance

Power–interest prioritization

Manage closely

Management, operations lead, inventory lead, accounting, Odoo administrator, quality lead.

Keep satisfied

Major suppliers and retailers, key customers, senior decision-makers.

Keep informed

Warehouse operators, inspectors, repair technicians, donation recipients.

Monitor

Occasional logistics or recycling contacts, with clear handover instructions.

Stakeholder needs and conflicts

Tension	Principle
Supplier speed vs complete intake data	Clear intake criteria
Sales speed vs quality and food safety	Safety checks come first
More repairs vs repair economics	Compare cost, resale value, safety
Partner needs vs stock accuracy	Inventory keeps accurate records
Simple workflows vs accounting evidence	Consistent references
KPI demand vs available data	Consistent KPI definitions

Communication plan

Communication	Audience	Trigger	Evidence
Supplier intake agreement	Supplier, sourcing	Before first collection	Acceptance criteria
Inspection exception	Inventory, Quality	Failed or missing info	Quality alert
Repair status	Technician, Sales	Start, finish, failure	Repair order
Donation or recycling handover	Operations, partner	Each handover	Transfer record, receipt
KPI review	Management, finance	Weekly or monthly	Standard reports
Configuration and testing	Admin, key users	Before go-live	Test checklist, sign-off

Core entities mapped to standard Odoo

Entity	Standard Odoo record
Contact / Partner	Contacts
Product	Products and categories
Lot / Serial Number	Lots/Serials, expiry dates
Warehouse / Location	Locations: Returns, Inspection, Repair, Resale
Receipt / Transfer	Receipts, internal transfers, deliveries
Quality Check / Alert	Quality app
Repair Order	Repair app
Sale and Purchase	Sales, Purchase, Invoices, Vendor Bills
Scrap / Disposal	Scrap operation

Relationship map

Partner

Supplier, customer or recovery partner.

Receipt

Stock moves for a Product and its Lot or Serial.

Quality Check

Condition result and recommended route.

Route

Repair Order, Sales Order, donation transfer or scrap.

Commercial path

Sales Order → Delivery → Invoice through standard workflows.

Non-sale path

Donation, recycling or scrap recorded as stock movements with evidence.

Data integrity and business rules

Traceability

One product master. Serials for devices, lots for batches. Every quantity change through a stock operation.

Safety gates

No resale or donation before checks pass. Never sell or donate unsafe or expired food.

Evidence

Keep proof of donation, recycling and disposal handovers.

Governance

Standard user groups, consistent KPI definitions, accounting treatment confirmed by an accountant.

User roles and access

Role	Responsibilities
Inventory Operator	Receipts, transfers, deliveries, scrap
Quality Inspector	Inspection checks and alerts
Repair Operator	Repair orders and parts usage
Sales User	Quotations and sales orders
Accounting User	Invoices, bills, financial reports
Odoo Administrator	Apps, users, access rights
Management / Viewer	Read-only reports and KPIs

Principle: each role gets only the access its duties require.

Acceptance testing and open questions

Acceptance checklist

No duplicate partner or product records
Receipt to the correct location
Lot, serial and expiry behave as expected
Inspection outcome recorded
Repair scenario completed
Sale → delivery → invoice
Donation, recycling, disposal traceable
Quantities reconcile after each test

Open questions

Stock ownership: own, service or consignment
Food handling and safety decisions
Approval and evidence per route
Mandatory KPIs

Full traceability, standard Odoo only

Each item is traceable from receipt through inspection to repair, resale, donation, recycling or disposal, using existing Odoo records rather than custom tables or fields.
