# RELOOP 360 — Fit-Gap Analysis

Odoo configuration-only implementation | Based on the Project Documentation and the Stakeholder Analysis and Database Design

*Ratings assume standard Odoo 20 (released 24 September 2026) with no custom development and no Odoo Studio, and the Enterprise edition. Community differences are shown in section 2. Edition-dependent items must be confirmed in the actual database.*

## 1. Method and rating scale

Each requirement from the two source documents was compared with what standard Odoo apps and settings can do.

| Rating | Meaning |
|---|---|
| **Fit** | Covered by standard configuration |
| **Partial** | Covered with a manual step, documented process or edition/version check |
| **Gap** | No standard support; handled outside Odoo or logged as a limitation |

## 2. Summary

| Scenario | Fit | Partial | Gap | Total |
|---|---|---|---|---|
| Odoo 20 Enterprise | 14 | 8 | 5 | 27 |
| Odoo 20 Community | 10 | 11 | 6 | 27 |

The core flow Return, Inspection, Decision, Recovery is achievable in standard Odoo. The gaps are concentrated in automated decisions, custom metrics and dashboards, supplier acquisition and compliance enforcement, all of which the project scope already excludes or treats as manual.

## 3. What Odoo 20 changes

The edition decision is the main risk: in Odoo 20, Quality, Barcode and full Accounting are Enterprise-only, and several Quality, Repair and Inventory changes affect this plan.

| Area | Odoo 20 change | Effect on RELOOP 360 |
|---|---|---|
| Edition | Quality, Barcode and full Accounting are Enterprise-only; Community has Inventory, Purchase, Manufacturing, Maintenance and Invoicing | Community needs manual checklists and no barcode scanning (R5, R6, R17, R25) |
| Quality | Admins can validate transfers without checks; a failure location can be set from a failed check | Route failed items to a Repair or Recovery location; limit the bypass right to a few admins (R6, R11) |
| Repair | Invoice directly from repair orders; services can be added; the Under Repair status is removed | Record labor as services; update procedures and training (R9, R19) |
| Inventory | Stock at a past date, an ageing report in Moves Analysis, a Valuation Adjustments menu in debug mode | Better support for reviewing stock and value by route (R20) |
| Accounting | Parent accounts replace account groups; payment statuses renamed Paid and Reconciled | Configure the chart and train users on the new terms (R18) |
| Returns | The return wizard is removed | Confirm how returned items are registered at intake (R1) |

| Area | Odoo 20 change | Effect on RELOOP 360 |
|---|---|---|
| Industry package | New Electronic Refurbishment package with refurbishment grades and VAT margin scheme accounting | Evaluate against R2 and R7; confirm availability and that no customization is needed |
| AI | AI agents and MCP need purchased credits; agentic AI is on the Custom plan | Outside the configuration-only baseline; a possible later aid for R7 |

## 4. Fit-gap by requirement (Odoo 20 Enterprise)

| ID | Requirement | Standard Odoo 20 approach | Rating |
|---|---|---|---|
| R1 | Receive returned, surplus or near-expiry items with product, quantity, source | Inventory receipts | Fit |
| R2 | Separate stages: Returns, Inspection, Repair, Recovery, Ready for Resale | Warehouse locations and internal transfers | Fit |
| R3 | Serial and lot traceability for devices and food batches | Lot/serial tracking per product | Fit |
| R4 | Expiration dates and FEFO for food | Expiration dates and FEFO removal strategy; confirm behavior in Odoo 20 | Partial |
| R5 | Inspection checks (condition, power, packaging, missing parts, expiry) | Quality control points (Enterprise-only app) | Fit |
| R6 | Record inspection outcome and alerts | Quality checks and alerts; failure location can be set from a failed check | Fit |
| R7 | Recovery route decision and Smart Recovery Score | No decision engine; manual decision checklist | Gap |
| R8 | Repair orders with parts and status | Repair app; confirm it is included in the chosen edition | Fit |
| R9 | Return repaired item to the correct stock location | Standard repair flow; the Under Repair status is removed, so test the flow | Partial |
| R10 | Resale: quotation, delivery, invoice | Sales, Inventory, Accounting | Fit |
| R11 | Sell only after inspection and preparation | No hard block; Quality admins can bypass checks, so restrict that right and control through location and procedure | Partial |
| R12 | Discount near-expiry food under policy | Price lists and discounts | Fit |
| R13 | Donation with recipient and evidence | No dedicated workflow; stock movement to a partner plus attached documents | Partial |
| R14 | Recycling handoff | Same approach as donation | Partial |
| R15 | Scrap and disposal | Standard scrap operation | Fit |
| R16 | Spare parts and packaging purchasing | Purchase app (optional) | Fit |
| R17 | Invoices, vendor bills, credit notes, expenses | Accounting (full Accounting is Enterprise-only) | Fit |
| R18 | Treatment of donations, recycling, write-offs, recovered inventory | Accounts configured with an accountant, using parent accounts; no automatic treatment | Partial |
| R19 | Capture repair and collection costs | Parts and services on repair orders; collection costs may need manual recording | Partial |
| R20 | Counts, quantities, sales and cost reporting | Standard reports, plus stock at a past date and the ageing report | Partial |

| ID | Requirement | Standard Odoo 20 approach | Rating |
|---|---|---|---|
| R21 | Recovery rate, resale rate, recovered value | No standard metric; documented manual calculation | Gap |
| R22 | Custom dashboard or automatic score | Not possible without Studio or development | Gap |
| R23 | Role-based access | Standard user groups; record-rule domains now set on access rights | Fit |
| R24 | Supplier, customer and partner records | Contacts | Fit |
| R25 | Barcode scanning (supporting) | Barcode app (Enterprise-only) | Fit |
| R26 | Supplier outreach and agreement management | Not covered by the planned apps; managed outside Odoo | Gap |
| R27 | Food-safety and legal compliance enforcement | Policy and procedure; Odoo does not enforce rules | Gap |

## 5. Gap register and proposed handling

| Gap | Impact | Proposed handling | Owner |
|---|---|---|---|
| R7 Route decision | Route chosen manually; risk of inconsistency | Standard decision checklist: condition, repair cost, expected value, reuse potential, recommended route | Quality inspector, operations lead |
| R21 KPIs | No automatic recovery rate or recovered value | Agree definitions and denominator; maintain a documented calculation sheet from standard reports | Accounting, management |
| R22 Dashboard and score | No custom dashboard or automatic scoring | Log as limitation and future enhancement | Project owner |
| R26 Supply acquisition | Agreements not tracked in Odoo | Keep agreements and intake criteria in controlled documents; attach to the partner record | Sourcing lead |
| R27 Compliance | System cannot block unsafe release | Written acceptance rules and stop conditions; inspection sign-off before resale or donation | Food-safety / compliance |

## 6. Edition and feature checks (week 1)

These items decide whether a Partial becomes a Fit or a documented manual process:

- Enterprise or Community: Quality, Barcode and full Accounting are Enterprise-only in Odoo 20.
- Whether Repair is included in the chosen edition and plan.
- Expiration dates and FEFO behavior for food lots in Odoo 20.
- How a repaired item returns to stock in the Odoo 20 Repair flow.
- Whether a donation or recycling handover can use a dedicated operation type or location with attached documents.
- Which standard reports show quantities, costs and sales per route, including the new past-date and ageing reports.
- Whether the Electronic Refurbishment industry package is available and fits without customization.

## 7. Recommendations

1. Decide Community or Enterprise before design sign-off, since Quality, Barcode and full Accounting are Enterprise-only in Odoo 20.
2. Prototype R4, R5, R9, R13 and R14 first, since their rating depends on the installed version.

3 Create the decision checklist template and the KPI calculation sheet as deliverables.

4 Have an accountant confirm the treatment in R18 before go-live.

5 Record every Gap and unresolved Partial in the final limitations and future-improvements section.
